Piovan Company FDM Moves to New Site

FDM moved from Königswinter to Troisdorf (figure: FDM)

FDM, a company of the Piovan Group, Santa Maria di Sala, Italy, and supplier of material handling solutions for the extrusion process, announced the move to a new production facility located in Troisdorf, Germany - inside the industrial park called "Airport Gewerbepark Junkersring".

The new production space of 1,900 m² is twice the former building in Königswinter, Germany, and started to be operational on July 1st 2015, with possible future expansions, as the new factory arises on a ground of 6,000 m². With this move, FDM will be able to improve both its engineering services and systems supply, by reducing the lead times and leveraging further capacity to handle increased volumes. This investment is in line with the company's strategy to continually invest in people, tools and equipment to produce feeding systems for pellets, recycled materials and powder, gravimetric dosing systems, complete material handling systems for the PVC treatment, recycling and compounds.
